

Quality Assurance | Quality Control

The goal of our Quality Assurance/Quality Control Program is to provide our clients with the highest standards available in the marketplace – without sacrificing cost or timeliness. In conjunction with our stakeholders, Valenti Builders has developed and implemented a Quality Assurance/Quality Control Program with the following main components:

1. Pre-construction Analysis

Valenti Builders reviews critical details and systems prior to commencement to confirm quality.

2. Document Control

Valenti Builders assures that all parties are using the appropriate documents for construction.

3. Third Party Consultants

Valenti Builders enlists the services of outside consultants to assist with quality issues when appropriate.

4. Training and Communication

Valenti Builders ensures that all personnel and subcontractors understand the quality requirements of the project and will provide training and education as required. Valenti Builders holds Pre-installation Conferences prior to the start of any major phase of construction.

5. Documentation

Valenti Builders documents the installation of all critical components of the project using photos, reports and 3rd party consultants.

6. Corrective Action

Valenti Builders performs immediate correction to all non-conforming work.

7. Warranty Responsiveness

Valenti Builders has a specific protocol for addressing warranty issues.
